# 1 EXECUTIVE SUMMARY

## EXECUTIVE SUMMARY

The Watsonville Parks Assessment Report (Assessment) is a comprehensive evaluation of the existing City and County parks within the Watsonville community's sphere of influence. The assessment offers a holistic perspective of the entire park system by providing a priority ranking that accounts for individual parks' conditions, uniquenesses, and hyper-local communities. The goal of the report is to provide the City of Watsonville (City) and County of Santa Cruz (County) staff with a tool to help make data-informed decisions when allocating funding for park improvement and planning efforts.

The assessment establishes a priority ranking system that takes into consideration three key factors: condition, community value, and equity. Assessing the needs of parks based on their physical condition, in combination with social factors in relation to the community they serve, provides a more comprehensive and inclusive understanding of each park. This assessment provides a detailed description of the park priority ranking methodology, estimated costs for replacing park infrastructure in kind, and an analysis of the park priority ranking results.

The results of the assessment revealed the following:

- The 2 highest priority City parks for renovations, out of 24 assessed City parks, are River Park and Callaghan Park.
- The 2 highest priority County parks for renovations, out of 5 assessed County parks, are Pinto Lake County Park and Mesa Village County Park.

- To renovate all 24 assessed City parks in kind, the estimated cost is \$78,000,000.
- Including costs to renovate City Plaza and Ramsay Park, which were not assessed as a part of this assessment because they are slated to begin renovations in 2024, the total estimated cost to renovate all City parks is \$117,600,000.
- Taking into account the City’s 2022 Building Facility Assessment estimated \$24,900,000 in deferred maintenance needs across the City’s recreation facility buildings, the estimated deferred maintenance costs with no funding secured is estimated to be \$53,900,000.
- To renovate the park infrastructure that has a condition rating of 1 or 2 across all 24 assessed City parks, the estimated cost is \$29,000,000.
- To renovate all 5 assessed County parks in kind, the estimated cost is \$39,000,000.
- To renovate the park infrastructure that has a condition rating of 1 or 2 across all 5 assessed County parks, the estimated cost is \$14,500,000.

# 2 INTRODUCTION

## INTRODUCTION

### BACKGROUND

In January 2023, the City of Watsonville (City) partnered with the County of Santa Cruz (County), to undertake the development of a comprehensive parks assessment in order to gain a holistic perspective of the existing Watsonville park system. The current park system serves nearly 52,000 City residents as well as neighboring County residents and the Pajaro Valley community just south of the City limit. A total of 29 parks were evaluated as a part of this assessment, including 24 of the City's 26 parks, and 5 County parks that were determined to be within the Watsonville community's sphere of influence. Two of the City parks, Ramsay Park and City Plaza, were excluded from this assessment because they are slated for redevelopment in 2024.

The need for the assessment was spurred, in November 2022, by the passage of Measure R, the Community Investment Tax Measure, a half-cent sales tax on most goods sold within the City to help fund community investments. Some of the community investments applicable to parks includes park repairs, playground expansions, trail maintenance, and safe spaces for children to recreate. As funding becomes available for parks from Measure R and other sources, this assessment will aid City and County staff in making informed, data-driven decisions, ensuring that funding is allocated efficiently and equitably to enhance the park system and ultimately best serve the needs of the community.

## CITY OF WATSONVILLE PARK SYSTEM

24 of the City’s 26 parks were included in this assessment. For planning purposes, parks are classified by type based on the size, use, and physical characteristics of the land. The public has access to almost 143 acres of existing City parks, which include the following park types:

- 3 Community Parks
- 6 Neighborhood Parks
- 17 Pocket Parks

Approximately 70 acres, of the 143 acres, are waterways on the City-owned side of Pinto Lake Park.

## SANTA CRUZ COUNTY PARK SYSTEM

The County’s park system currently includes 41 parks, 5 of which were determined to be within the Watsonville community and were evaluated as a part of this assessment. The 5 parks evaluated for this study have a combined acreage of 237 acres, and for planning purposes, are categorized as Regional Parks and Neighborhood Parks.

## PURPOSE

The purpose of this assessment is to provide a tool that the City, County, and greater Watsonville community can utilize to develop a more effective, equitable, and informed approach for allocating financial resources available to improve park infrastructure. The assessment provides a park priority ranking based on each park’s need for new infrastructure improvements. This system-wide ranking provides a holistic understanding of the park system. A data-driven ranking methodology was developed to determine the ranking for each park. Maintaining objectivity was crucial in establishing the priority ranking methodology in order to ensure the integrity of the park ranking results.

The assessment will be utilized by both City and County staff to help make informed decisions on future capital improvement projects, and by Parks Maintenance Staff to identify and keep a record of park infrastructure that are most in need of attention. The assessment is also a resource for City Council and the County Board of Supervisors to stay informed about the current

FIGURE 2. PICNIC AREA AT PINTO LAKE COUNTY PARK

FIGURE 3. GEESE AT PINTO LAKE CITY PARK

and future needs of the park system, and for the community to understand the data behind the decisions made about funding park projects. Application of this assessment will help the City and County move towards an improved park system that provides enjoyment and added value to the community.

### LIVING DOCUMENT

To ensure the rankings remain accurate, the assessment results should be updated every ten years, roughly whenever new census results are released, to reflect capital improvements and natural deterioration of park infrastructure, evolving community demographics and priorities, and future inflation. This includes re-evaluating park infrastructure conditions to account for wear, damage, or development of new improvements and parks; and updating social equity data and ranges to reflect current census data.

### LIMITATIONS & EXCLUSIONS

The ranking shown in the assessment reflects current data on conditions and demographics. This assessment does not analyze the future potential of assessed parks. Changes related

to on-going material deterioration, unforeseen accident/damage events, population changes, and evolving social equity definitions will impact the rankings. Costs shown in the assessment represents an estimate of current and future costs based on today's market, however costs are subject to change as materials, contractors, and construction methods change with time.

This plan covers a significant portion of the Watsonville community's park infrastructure, though not all infrastructure could be included due to limitations with funding, staffing, or requirements for qualified professional expertise to develop and complete condition assessments, analysis, and costing for specific elements, such as:

- Buildings that are not restrooms or maintenance sheds
- Select restrooms
- Trees
- Trails
- Natural lands

# 3 INFORMATION AND DATA

March 2024  
Watsonville Parks Assessment Report

## INFORMATION AND DATA

To objectively rank each park in relation to each other, data was collected for each of the following factors that were determined to be critical for the park priority ranking:

1. Condition
2. Community Value
3. Equity

## CONDITION

Park infrastructure is defined as a component within a park that is owned and managed by the City or County and contributes to a park's utility and value. To evaluate the current condition of each park's unique infrastructure, three different tools were developed:

1. Parks Infrastructure List
2. Condition Rating Criteria
3. Database of Park Infrastructure

From a basic bench where seniors rest, to playground structures for children, and sports fields used to host programmed events, parks are composed of a wide range of infrastructure. To simplify and organize into categories all of the unique types of park infrastructure, a Parks Infrastructure List was created (see figure 8).

FIGURE 4. BENCH AT RIVER PARK

DRAFT

To consistently assess all of the various park infrastructure components, a Condition Rating Criteria was established (see figure 10). At its core, the criteria identifies the condition rating of park infrastructure components, where:

- 1 = Failed
- 2 = Poor
- 3 = Fair
- 4 = Fair
- 5 = Excellent

Specific criteria were developed to assess each infrastructure category, such as pavement, irrigation, and signage.

To document the park infrastructure data collected in the field, a comprehensive database was created using Geographic Information

Systems (GIS). The GIS database was used to inventory existing park infrastructure listed on the Park Infrastructure List. Types of information documented include location, quantity, condition rating based on the Condition Rating Criteria (see figure 10), photos, and notes for poor/failed conditions or unique items.

The GIS database can be updated by park staff in the future to help the City maintain an accurate overview of park infrastructure across the park system. The City plans on integrating the GIS data gathered during this assessment into Cityworks (the City’s public asset management software) to further develop the City’s management of park infrastructure.

FIGURE 5. COMMUNITY MEMBERS FILLING OUT QUESTIONNAIRES AT WORKSHOP #1

FIGURE 6. INFORMATIONAL MAPS AT WORKSHOP

## COMMUNITY VALUE

The community’s priorities for the park system were another important factor that was accounted for as a part of this assessment. A community value rating, from 1 to 5, was assigned to core park infrastructure components listed on the Parks Infrastructure list (see figure 8 and figure 9) where:

- 1 = Highest Value
- 2 = High Value
- 3 = Medium Value
- 4 = Low Value
- 5 = Lowest Value

The ratings were based on information obtained through an outreach phase of this assessment as well as data collected during the development of the City of Watsonville’s 2020 Park and Recreation Strategic Plan and the County of Santa Cruz’s Strategic Plan 5-year update which included their South County Outreach.

During the outreach phase, a total of 138 questionnaires were collected across three in-person workshops. These workshops were scheduled to coincide with other community events in order to optimize participation. Workshop #1 was aligned with County Park Friend’s Family Day, Workshop #2 took place during the weekly Watsonville Farmer Market, and Workshop #3 coincided with programmed youth sports events.

The largest proportion of questionnaire respondents were between the ages of 22 to 64, live in Watsonville, visit parks multiple times per week, and strongly agree that the City and County should prioritize efforts and funding towards parks. Respondents valued restrooms and playgrounds the most; horseshoe pits, bocce ball courts, and pickleball courts were valued the least.

The outreach phase consisted of three workshops, where questionnaires in both English and Spanish were available to participants. All three workshops included at least one Spanish translator present.

- Workshop #1, May 6, 2023 from 12:30 pm to 2 pm at Pinto Lake County Park
  - 20 English questionnaires and 16 Spanish questionnaires were collected
- Workshop #2, May 12, 2023 from 4:30 pm to 6 pm at the Watsonville Farmers Market
  - 63 English questionnaires and 6 Spanish questionnaires were collected
- Workshop #3, May 13, 2023 from 10:30 am to 12 pm at Ramsay Park
  - 26 English questionnaires and 7 Spanish questionnaires were collected

## EQUITY

Equity is another factor assessed as a part of the park assessment. Equity census data and aerial data, from 2019 to 2023, that were evaluated include:

- Access (ie. access to park land)
- Age
- Disability
- Environmental Health
- Income
- Population Density
- Racially Disadvantaged
- Safety

The process of gathering data for each of these categories in order to develop an equity score for each park is further explored in the next chapter.

FIGURE 9. PARK INFRASTRUCTURE LIST 3 OF 4 AND 4 OF 4

CONDITION RATING CRITERIA	
Score	Description
<b>General</b>	
5	New or near new condition, no visible defects
4	Light / normal signs of wear, superficial damage, no major defects
3	Functioning as intended, noticeable signs of deterioration, some minor repairs are required
2	Multiple major defects, signs of excessive wear, not fully functioning, needs substantial repair
1	Not functional, unsafe to use, replacement is required or deficient
<b>Hardscape / Paths</b>	
5	New or near new condition, no visible defects
4	Light / normal signs of wear, superficial damage, no major defects, permeable surfaces have light weed growth
3	Surface is moderately worn with limited cracking and lifting, markings need maintenance, permeable surfaces have significant weed growth
2	Surface is heavily worn and uneven throughout with major cracking and lifting, markings worn or absent, permeable surfaces are weedy and/or migrating significantly
1	Hazardous, major holes, buckling or erosion, permeable surfaces are heavily eroded
<b>Turf / Ornamental Landscape</b>	
5	Vigorous and healthy, no signs of defects
4	Moderate levels of annual weeds and gaps, die back can be addressed with regular maintenance
3	Weedy, significant gaps / die back requiring rehabilitation
2	Major defects, rehabilitation not expected
1	Dead or missing plant material, potentially hazardous
<b>Irrigation</b>	
5	New system, equipment meets current City standards and is designed for MWEL0
4	Equipment meets current City standards and is water efficient, normal maintenance needs with no major problems
3	Outdated equipment does not meet City standards, system functional but not water efficient
2	Outdated equipment, parts of system are not functional, has multiple minor leaks, coverage problems apparent from plant die back.
1	Major system breaks, not functional
<b>Signage</b>	
5	New or near new condition, no visible defects, fully legible
4	Light / normal signs of wear, fully legible
3	Noticeable signs of deterioration, fully legible
2	Multiple major defects, signs of excessive wear, not fully legible
1	Replacement is required, illegible

FIGURE 10. CONDITION RATING CRITERIA

# 4 PARK RANKING METHODOLOGY

## PARK RANKING METHODOLOGY

After information and data for the three factors was gathered (condition, community value, and equity), a park ranking methodology was developed to show which parks should be higher priority for maintenance, planning efforts, and funding based on the existing parks (not the future potential of the parks). This chapter explains the different components of the park ranking methodology in addition to park infrastructure category scores that compliment the park rankings.

On the following pages is an outline of the various factors that contributed to the park ranking (see figure 11), as well as a chart that summarizes what the different scores for each factor means (see figure 12).

## PARK RANKING LISTS

Two different park ranking lists were developed: one for City parks and a second for County parks. Each park ranking list ranks all parks belonging to their respective organization from 1 to the number of parks that were evaluated, ie. 1 to 24 for the City Park Ranking and from 1 to 5 for the County Park Ranking, where:

- 1 = highest priority for park improvements
- for the City Park Ranking,  
24 = lowest priority for park improvements
- for the County Park Ranking,  
5 = lowest priority for park improvements

A park's rank was determined by a park's priority score. All of the park priority scores are sorted from lowest to highest. The lower a park's priority score, the closer the park's rank is to 1.

### PARK PRIORITY SCORE

A park priority score is a score from 1 to 5, where:

- 1 = highest priority for park improvements
- 5 = lowest priority for park improvements

A park's priority score is composed of three different factors with the following percentages contributing to the score:

- 50% Park Condition Score
- 10% Park Community Value Score
- 40% Park Equity Score

A park's condition is the most impactful indicator for a park's need for improvements. If the park infrastructure component is a safety hazard, is broken, or is unusable, restoring the component should take priority to ensure the safety of the public. The other factors are intended to distinguish priority between parks with similar condition scores.

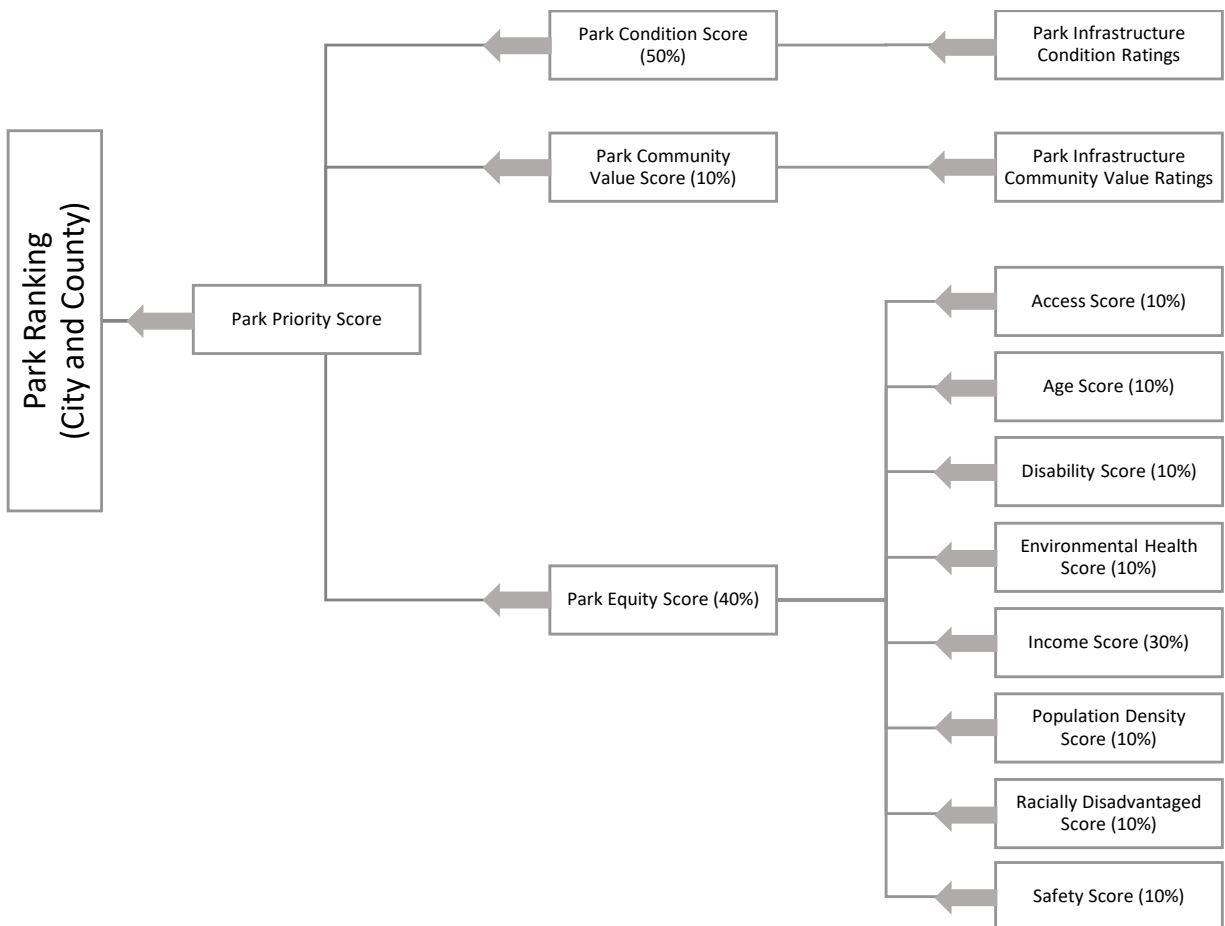

FIGURE 11. PARK RANKING BREAKDOWN CHART

	Summary of Meanings of 1 and 5 for Each Score Type	
	1 Highest Priority for Park Improvements	5 Lowest Priority for Park Improvements
<b>Priority Score</b>	<b>Highest</b> Priority for Park Improvements	<b>Lowest</b> Priority for Park Improvements
<b>Condition Score</b>	<b>Worst</b> Condition	<b>Best</b> Condition
<b>Community Value Score</b>	<b>Highest</b> Value to Community	<b>Lowest</b> Value to Community
<b>Equity Score</b>	<b>Most</b> Socially Disadvantaged	<b>Least</b> Socially Disadvantaged
<b>Access Score</b>	<b>Lowest</b> Park Acreage within 1/2 mile	<b>Highest</b> Park Acreage within 1/2 mile
<b>Age Score</b>	<b>Highest</b> % of People Under 18 or 65 and Over	<b>Lowest</b> % of People Under 18 or 65 and Over
<b>Disability Score</b>	<b>Highest</b> % of People with a Disability	<b>Lowest</b> % of People with a Disability
<b>Environmental Health Score</b>	<b>Highest</b> Pollution Burden	<b>Lowest</b> Pollution Burden
<b>Income Score</b>	<b>Lowest</b> Income	<b>Highest</b> Income
<b>Population Density Score</b>	<b>Highest</b> Population Density	<b>Lowest</b> Population Density
<b>Racially Disadvantaged Score</b>	<b>Highest</b> % of Racially Disadvantaged Individuals	<b>Lowest</b> % of Racially Disadvantaged Individuals
<b>Safety Score</b>	<b>Highest</b> Amount of Reported Crimes	<b>Lowest</b> Amount of Reported Crimes
<b>Park Infrastructure Category Score</b>	<b>Highest</b> Priority for Improvements	<b>Lowest</b> Priority of Improvements

FIGURE 12. SUMMARY OF MEANINGS OF 1 AND 5 FOR EACH SCORE TYPE

### PARK CONDITION SCORE

A park’s condition score is the average of all of the condition ratings of a park’s infrastructure categories. The scores range from 1 to 5, where:

- 1 = worst condition and highest priority for park improvements
- 5 = best condition and lowest priority for park improvements

An infrastructure category’s condition rating is the average of all of the condition ratings of the infrastructure components that are categorized as within the infrastructure category.

### PARK COMMUNITY VALUE SCORE

A community value rating has been assigned to each park infrastructure component based on public feedback about how valuable each particular component is to the community. The park infrastructure component community ratings were determined using community input gathered during the outreach phase of this project as well as data published in the City of Watsonville Park and Recreation Strategic Plan, and the County of Santa Cruz’s Strategic Plan 5-year update which included their South County Outreach, which comprised of surveys administered at the Watsonville Mercado on May 30, 2023 and Watsonville Farmers Market on

Park Infrastructure Component	Community Value Rating
Baseball Field	2
Basketball Court	2
Bike Pump Track	2
Boating / Fishing Dock	2
Bocce Ball Court	3
Concessions	5
Disc Golf	3
Dog Park	2
Fitness Equipment	2
Handball Court	3
Horseshoe Pit	3
Natural Lands / Open Space	1
Ornamental Planting	2
Park Lighting	1
Parking Lot	1
Pickleball Court	3
Picnic Area	1
Playground	1
Public Art	2
Recreational / Open Turf	1
Restroom	1
Shade Structure	1
Skate Park	2
Soccer Field	1
Softball Field	2
Tennis Court	3
Trails / Levee Access / Walking Path	1
Volleyball Court	2
Walking Path	1

FIGURE 13. COMMUNITY VALUE RATING CHART

June 2, 2023 and June 9, 2023. A component’s community value rating is a number from 1 to 5, where:

- 1 = highest value to the community and highest priority for park improvements
- 5 = least value to the community and lowest priority of park improvements

To the left is a table (see figure 13) with each park infrastructure component’s community value rating.

A park with more components with a community value rating of 1 is given higher priority. The park community value score reflects how much the community values a particular park’s components. The park community score is a number from 1 to 5, where:

- 1 = highest number of park infrastructure components with a community rating of 1 and the highest priority for park improvements
- 5 = lowest number of park infrastructure components with a community rating of 1 and the lowest priority for park improvements

A community value score from 1 to 5 has been assigned to each of the community value rating of 1 ranges as shown on the table below (see figure 14):

Number of Park Infrastructure Components with a Community Rating of 1	Community Value Score
20 or More	1
15 to 19	2
10 to 14	3
5 to 9	4
0 to 4	5

FIGURE 14. COMMUNITY VALUE SCORE RANGES CHART

The community value score ranges were established to strike a balance between achieving an even distribution of scores and maintaining a relative consistency for the range of each score. The following list details the current number of parks that were assessed, in addition to City Plaza and Ramsay Park, that fall into each community value score range:

- 10 Parks, 20 or more
- 4 Parks, 15 to 19
- 5 Parks, 10 to 14
- 4 Parks, 5 to 9
- 6 Parks, 0 to 4

## PARK EQUITY SCORE

A park's equity score takes into account eight different social factors:

1. Access
2. Age
3. Disability
4. Environmental health
5. Income
6. Population density
7. Racially disadvantaged races
8. Safety

Equity scores are a number from 1 to 5, where:

- 1 = most socially disadvantaged and highest priority for park improvements
- 5 = least socially disadvantaged and lowest priority for park improvements

Each social factor is given a score from 1 to 5 for each park. The eight different equity social factor scores contribute to a park's equity score based on the percentages in the following list:

- 10% Access Score
- 10% Age Score
- 10% Disability Score
- 10% Environmental Health Score
- 30% Income Score
- 10% Population Density Score
- 10% Racially Disadvantaged Score
- 10% Safety Score

A park's income score makes up the majority of its equity score due to income being one of the most influential determinants of someone's overall wellbeing, according to the American Public Health Association<sup>1</sup>. In addition, all of the equity social factor score ranges were established to strike a balance between achieving an even distribution of scores and maintaining a relative consistency for the range of each score.

## ACCESS SCORE

The access factor gives higher priority to parks with less park acreage within a half-mile radius. A quarter-mile to half-mile, roughly a 10-minute walk, is a standard for how far and long most people are willing to walk to reach a destination by the U.S. Department of Transportation, Trust for Public Land, and National Recreation and Park Association.

A park's access score is a number from 1 to 5, where:

---

<sup>1</sup> Krisberg, K. (2016, October 1). Income inequality: When wealth determines health: Earnings influential as lifelong social determinant of health. The Nation's Health. <https://www.thenationshealth.org/content/46/8/1.1>

- 1 = lowest amount of park acreage within a half-mile radius from the center of a park
- 5 = highest amount of park acreage within a half-mile radius from the center of a park

A park’s total park acreage is calculated by adding the acreage of the park and the acreage of any additional park within a half-mile radius. A score from 1 to 5 is assigned as follows:

Park Acreage	Access Score
Under 2.5 Acres	1
2.5 Acres to under 5 Acres	2
5 Acres to under 10 Acres	3
10 Acres to under 20 Acres	4
Over 20 Acres	5

FIGURE 15. ACCESS SCORE RANGES CHART

The following list details the current number of parks that were assessed, in addition to City Plaza and Ramsay Park, that fall into each park acreage range:

- 4 Parks, under 2.5 Acres
- 6 Parks, 2.5 Acres to under 5 Acres
- 6 Parks, 5 Acres to under 10 Acres
- 4 Parks, 10 Acres to under 20 Acres
- 11 Parks, Over 20 Acres

### AGE SCORE

The age score gives higher priority to parks located within a census block group that has a higher percentage of people under 18 years old and those 65 years old and over. These community members generally have more limited access to transportation and/or have more limited physical mobility to be able to travel

to further destinations. Parks in closer proximity to people with limited transportation access are prioritized for improvements.

A park’s age score is a number from 1 to 5, where:

- 1 = highest percentage of people under 18 years old and 65 years old and over, and highest priority for park improvements
- 5 = lowest percentage of people under 18 years old and 65 years old and over, and lowest priority for park improvements

An age score from 1 to 5 has been assigned to each of the following age percentage ranges:

Percentage of People Under 18 Years Old and 65 Years Old and Over	Age Score
50% to 100%	1
45% to under 50%	2
35% to under 45%	3
25% to under 35%	4
0% to under 25%	5

FIGURE 16. AGE SCORE RANGES CHART

The following list details the current number of parks that were assessed, in addition to City Plaza and Ramsay Park, that fall into each age percentage range:

- 3 Parks, 50% to 100%
- 5 Parks, 45% to under 50%
- 16 Parks, 35% to under 45%
- 5 Parks, 25% to under 35%
- 2 Parks, 0% to under 25%

## DISABILITY SCORE

The disability score gives higher priority to parks located within a census tract that has a higher percentage of people with disabilities. These community members generally have more difficulty traveling to further destinations, thus parks in close proximity to people with disabilities are prioritized for improvements. Disabilities that are accounted for include the following:

- Hearing difficulty
- Vision difficulty
- Cognitive difficulty
- Ambulatory difficulty
- Self-care difficulty
- Independent living difficulty

A park’s disability score is a number from 1 to 5, where:

- 1 = highest percentage of people with a disability and highest priority for park improvements
- 5 = lowest percentage of people with a disability and lowest priority for park improvements

A disability score from 1 to 5 has been assigned to each of the following disability percentage ranges:

Percentage of People with a Disability	Disability Score
20% to 100%	1
15% to under 20%	2
10% to under 15%	3
5% to under 10%	4
0% to under 5%	5

FIGURE 17. DISABILITY SCORE RANGES CHART

The following list details the current number of parks that were assessed, in addition to City Plaza and Ramsay Park, that fall into each disability percentage range:

- 5 Parks, 20% to 100%
- 9 Parks, 15% to under 20%
- 8 Parks, 10% to under 15%
- 7 Parks, 5% to under 10%
- 2 Parks, 0% to under 5%

## ENVIRONMENTAL HEALTH SCORE

The environmental health factor gives higher priority to parks located within a census tract that has a higher CalEnviroScreen Score, according to the California Office of Environmental Health Hazard Assessment’s CalEnviroScreen 4.0. The CalEnviroScreen Score takes into account the following pollution burdens (potential exposures to pollutants and adverse environmental conditions) and population characteristics (biological traits, health status, and community characteristics that can result in increasing vulnerability to pollution):

- Pollution Burden
  - Air quality ozone
  - Air quality pm2.5
  - Drinking water contaminants
  - Pesticide use
  - Children’s lead risk from housing
  - Toxic releases from facilities
  - Diesel particulate matter
  - Traffic impacts
  - Cleanup sites
  - Groundwater threats

- Hazardous waste generators and Facilities
- Impaired water bodies
- Solid waste sites and facilities
- Population Characteristics
  - Asthma
  - Cardiovascular Disease
  - Low Birth Weight Infants
  - Educational Attainment
  - Housing Burden
  - Linguistic Isolation
  - Poverty
  - Unemployment

Community members who live in an area with higher pollution are more likely to suffer from health issues per the U.S. Department of Health and Human Services. Parks located in areas with higher pollution are prioritized for improvements.

A park’s environmental health score is a number from 1 to 5, where:

- 1 = highest pollution burden and highest priority for park improvements
- 5 = lowest pollution burden and lowest priority for park improvements

A park’s environmental health score is the assigned score of the CalEnviroScreen score within the census tract GEOID in which the park resides. An environmental health score from 1 to 5 was assigned to each CalEnviroScreen score range identified in the following table:

CalEnviroScreen Score	Environmental Health Score
40 to 100	1
30 to under 40	2
20 to under 30	3
10 to under 20	4
0 to under 10	5

FIGURE 18. ENVIRONMENTAL HEALTH RANGES CHART

The following list details the current number of parks that were assessed, in addition to City Plaza and Ramsay Park, that fall into each CalEnviroScreen score range:

- 10 Parks, 40 to 100
- 12 Parks, 30 to under 40
- 6 Parks, 20 to under 30
- 3 Parks, 10 to under 20
- 0 Parks, 0 to under 10

### INCOME SCORE

A park’s income score is a number from 1 to 5, where:

- 1 = lowest income and highest priority for park improvements
- 5 = highest income and lowest priority for park improvements

Income scores gives higher priority to parks located within a census block group that has a higher percentage of households with lower incomes. A park’s income score is determined by the household income census block group data in which the park resides. The income score is the sum of the number of households in each income range multiplied by their respective income rating, divided by the total number

of households within the census block group. Income ratings from 1 to 5 have been assigned to the following household income ranges as identified in the Income Ratings Ranges Chart (see figure 19):

Income Category	Income Range	Income Rating
Extremely Low	\$0 to \$39,999	1
Very Low	\$40,000 to \$74,999	2
Low	\$75,000 to \$99,999	3
Median	\$100,000 to \$124,999	4
Moderate & Above	\$125,000 or more	5

FIGURE 19. INCOME RATING RANGES CHART

The income ranges were determined by referencing the City of Watsonville’s affordable housing program bracket limits (effective 10/24/2023) for a 4 person household. The City of Watsonville’s average household size is 3.46.

To further refine the income ranges, the Covered California Program Eligibility by Federal Poverty Level for 2024, was referenced to determine the “Extremely Low” and “Very Low” income ranges. The “Extremely Low” income range is the income range for a 4-person household that qualifies for Medi-Cal and the “Very Low” income range is the income range for a 4-person household that qualifies for an enhanced plan under Covered California.

The following list details the current number of parks that were assessed, in addition to City Plaza and Ramsay Park, that have the following income score ranges:

- 6 Parks, 1.00 to under 2.00
- 11 Parks, 2.00 to under 3.00
- 13 Parks, 3.00 to under 4.00
- 1 Park, 4.00 to under 5.00
- 0 Parks, 5.00

## POPULATION DENSITY SCORE

The population density factor gives higher priority to parks located within a census tract that has a higher population density. Parks located in neighborhoods with higher population density are prioritized due to the increased number of users that they serve.

A park’s population density score is a number from 1 to 5, where:

- 1 = highest population density and highest priority for park improvements
- 5 = lowest population density and lowest priority for park improvements

The population density is calculated by dividing the total population by the square miles of the census block group. A population density score from 1 to 5 has been assigned to each of the following population density ranges:

Population Density	Population Density Score
10,000 or more people per square mile	1
5,000 to under 10,000 people per square mile	2
2,500 to under 5,000 people per square mile	3
500 to under 2,500 people per square mile	4
Under 500 people per square mile	5

FIGURE 20. POPULATION DENSITY SCORE RANGES CHART

Below lists the current number of parks that were assessed, in addition to City Plaza and Ramsay Park, that fall into each population density score range:

- 14 Parks, 10,000 or more people per square mile
- 7 Parks, 5,000 to under 10,000 people per square mile
- 2 Parks, 2,500 to under 5,000 people per square mile
- 5 Parks, 500 to under 2,500 people per square mile
- 3 Parks, Under 500 people per square mile

### RACIALLY DISADVANTAGED SCORE

The racially disadvantaged factor gives higher priority to parks located within a census block group that has a higher percentage of people who are of a racial group identified as socially disadvantaged by the National Archives and Records Administration, a federal agency in charge of recording government and historical documents.

A racially disadvantaged score is a number from 1 to 5, where:

- 1 = highest percentage of racially disadvantaged individuals and highest priority for park improvements
- 5 = lowest percentage of racially disadvantaged individuals and lowest priority for park improvements

The percentage of racially disadvantaged individuals living within the census block group is calculated by dividing the number of racially disadvantaged individuals by the total population. A score from 1 to 5 was assigned to each of the following percentage ranges of racially disadvantaged individuals:

Percentage of Racially Disadvantaged Individuals	Racially Disadvantaged Score
80% to 100%	1
60% to under 80%	2
40% to under 60%	3
20% to under 40%	4
0% to under 20%	5

FIGURE 21. RACIALLY DISADVANTAGED RANGES CHARTS

The following list details the current number of parks that were assessed, in addition to City Plaza and Ramsay Park, that fall into each racially disadvantaged score range:

- 8 Parks, 80% to 100%
- 20 Parks, 60% to under 80%
- 0 Parks, 40% to under 60%
- 3 Parks, 20% to under 40%
- 0 Parks, 0% to under 20%

### SAFETY SCORE

The safety factor gives higher priority to parks with more reported crimes.

A park's safety score is a number from 1 to 5, where:

- 1 = highest amount of reported crimes
- 5 = lowest amount of reported crimes

There are two different park safety scores ranges, one for City parks and another for County because the number of reported crimes for each park was provided by the City and County in two different data sets. The City's data provides the number of reported crimes within a 1,000 feet radius of a City park between October 2022 to September 2023. While the County's data provides the number of reported crimes at each County Park between October 2022

to September 2023. A score from 1 to 5 was assigned as follows:

City Parks	
Reported Crimes	Park Safety Score
25 or More Reported Crimes	1
15 to 24 Reported Crimes	2
11 to 14 Reported Crimes	3
6 to 10 Reported Crimes	4
0 to 5 Reported Crimes	5

FIGURE 22. CITY PARK SAFETY SCORE RANGES CHART

County Parks	
Reported Crimes	Park Safety Score
10 or More Reported Crimes	1
8 to 9 Reported Crimes	2
6 to 7 Reported Crimes	3
4 to 5 Reported Crimes	4
0 to 3 Reported Crimes	5

FIGURE 23. COUNTY PARK SAFETY SCORE RANGES CHART

The City parks safety score ranges were established to strike a balance between achieving an even distribution of scores and maintaining a relative consistency for the range of each score. The following list details the current number of parks that were assessed, in addition to City Plaza and Ramsay Park, that fall into each City parks safety score range:

- 11 Parks, 25 or More Reported Crimes
- 5 Parks, 15 to 24 Reported Crimes
- 2 Parks, 11 to 14 Reported Crimes
- 5 Parks, 6 to 10 Reported Crimes
- 8 Parks, 0 to 5 Reported Crimes

Below lists the current number of County parks that were assessed that fall into each County parks safety score range:

- 1 Park, 10 or More Reported Crimes
- 1 Park, 8 to 9 Reported Crimes
- 0 Parks, 6 to 7 Reported Crimes
- 0 Parks, 4 to 5 Reported Crimes
- 3 Parks, 0 to 3 Reported Crimes

## PARK INFRASTRUCTURE CATEGORY SCORE

The park infrastructure category score is the priority score for each individual park infrastructure category within a park. It's composed of the same factors that make up the park priority score: condition, community value, and equity. The park infrastructure category score does not directly influence park rankings; instead, it offers a nuanced assessment of the specific needs of each infrastructure category. Much like the park priority score, the park infrastructure category score is determined by allocating the following percentages from each contributing factor:

- 50% Condition Score
- 10% Community Value Score
- 40% Equity Score

A park's infrastructure category's score is a number from 1 to 5, where:

- 1 = highest priority for improvements
- 5 = lowest priority for improvements

# 5 PARK RANKINGS AND SCORES

## PARK RANKINGS AND SCORES

Following are tables that summarize the final park priority ranking as well as the condition, community, equity scores that make up the park priority scores.

## CITY PARKS RANKING AND SCORES

CITY PARKS ORGANIZED BY PRIORITY RANK					
Park	Priority Rank	Priority Score	Condition Score (50%)	Community Value Score (10%)	Equity Score (40%)
RiverPark	1	2.30	2.56	1.00	2.30
CallaghanPark	2	2.45	2.97	1.00	2.16

# 6 ESTIMATED COSTS

## ESTIMATED COSTS

Estimated replacement costs for each park were calculated as part of this assessment. It was estimated that renovating all 24 assessed City parks in-kind would cost \$78,000,000. To replace park infrastructure throughout the City's park system with a condition of 1 or 2, the estimated cost is \$29,000,000. Renovating all 5 assessed County parks in kind would cost an estimated \$39,000,000, while replacing park infrastructure for those with a condition rating of 1 or 2 would cost approximately \$14,500,000.

City Plaza and Ramsay Park are excluded from this study due to renovation plans, currently in the design phase, with construction anticipated to begin in 2024. The estimated construction and soft costs for Ramsay park amount to \$33,300,000 and \$6,300,000 for City Plaza. Furthermore, the City prepared a Building Facility Assessment in 2022 as part of a separate project, which identified \$24,900,000 in deferred maintenance needs across the City's recreation facility buildings.

These costs combined with the estimated expenses to replace City park infrastructure with a condition rating of 1 or 2 from this study, place the City's total deferred maintenance needs for parks and recreation facilities at \$93,500,000. While funding for City Plaza and Ramsay Park has been secured, there remains a \$53,900,000 deficit in funding to address deferred maintenance needs.

## ESTIMATED COSTS FOR EACH PARK

The City Parks Estimated Costs (see figure 34) and County Parks Estimated Costs (see figure 35) includes the amount needed to fully replace all of the existing infrastructure at each park, as well as the cost to replace only existing infrastructure with a condition rating of 1 (failing, safety hazard) or condition rating of 2 (poor).

## COST ESTIMATION PROCESS

The table of estimated infrastructure unit costs (see figure 36 to figure 41) includes individual cost, estimated construction costs, and estimated project total costs. Estimated construction cost accounts for start-up, mobilization, demolition, erosion control, grading, and contingencies. Project total cost accounts for construction costs and soft costs, which include design, engineering, surveying, testing and inspection, and city administration. The unit costs were used to calculate the estimated costs for each park, including the cost to replace only existing infrastructure with a condition rating of 1 or 2.

The following items were excluded from the cost estimate table:

- Buildings that are not restrooms or maintenance sheds
- Select restrooms
- Trees
- Trails
- Natural lands

## MAINTENANCE VERSUS RENOVATION

This assessment provides three types of estimated costs:

- Unit cost for replacement for a single park infrastructure item
- Cost to replace a park infrastructure category at each park
- Cost to renovate an entire park in kind

The above costs assume the work for replacement is being completed by a contractor and not in-house by park staff.

The decision regarding whether to completely renovate a park or to focus on replacing specific park infrastructure will be based on the available funding and the priorities set by the respective agencies for each individual park.

# 7 IMPLEMENTATION RECOMMENDATIONS

## IMPLEMENTATION RECOMMENDATIONS

Based on the assessment the following steps are recommended in order of highest priority to lowest priority:

- Address all park infrastructure components with a condition rating of 1 as soon as possible.
- Address all park infrastructure components with a condition rating of 2 when funding becomes available.
- Begin preparing funding for all park infrastructure components with a condition rating of 3 in anticipation of the eventual deterioration of those components to a condition rating of 2 and 1.
- Update the Park Infrastructure database on an ongoing basis to keep a current log of park infrastructure conditions as infrastructure is improved and target a comprehensive update every 10 years to ensure multi-year CIP and maintenance fund allocations are reflective of the latest conditions. See next section for summary for how to update parks assessment data.
- Develop and implement a planned maintenance program for infrastructure to extend the life of existing infrastructure.

## UPDATING PARKS ASSESSMENT DATA

When it's time to update the park assessment data, the following is a summary outlining the process for obtaining key data figures. These figures can be utilized to update an existing park summary sheet, create a new park summary sheet for a newly established park, update park rankings, or reassess the entire park system.

1. Determine a **Park's Condition Score**
  - o Record the condition of all park infrastructure components within the parks GIS database using the Condition Rating Criteria (see figure 10).
  - o Calculate the condition score for each park infrastructure category by taking the average of all park infrastructure components within each park infrastructure category. Reference the Park Infrastructure List (see figure 8 and figure 9) for which park infrastructure components belong in which park infrastructure categories.
  - o Calculate the average of all park infrastructure category condition scores to determine the park's condition score.
2. Determine a **Park's Community Value Score**
  - o Identify the quantity of park infrastructure components with a community value rating of 1. Using the Community Value Score Ranges Chart (see figure 14), determine the park's community value score based on the identified quantity.
3. Determine a **Park's Equity Score**
  - o Calculate the **access score** for the park by taking the sum of the acreage of the selected park and all parks within a half mile of the selected park. Using the Access Score Ranges Chart (figure 15), determine the park's access score based on the total acreage.
  - o Calculate the **age score** by identifying the quantity of people under 18 years old and 65 years old or over, and the total number of people that live within the census block group that the park resides in. Calculate the percentage of people within the census block group that are under 18 years old and 65 years old or over and determine the park's age score using the Age Score Ranges Chart (see figure 16).
  - o Calculate the **disability score** by identifying the number of people with a disability and the total number of people that live within the census tract that the park resides in. Calculate the percentage of people with a disability and determine the park's disability score using the Disability Score Ranges Chart (see figure 17).
  - o Determine the **environmental health score** by identifying the CalEnviroScreen Score for the census tract GEOID that the park resides in. Determine the park's environmental health score using the Environmental Health Ranges Chart (figure 18) based on the CalEnviroScreen Score.

- o Calculate the **income score** by identifying the number of households that fall into each of the five income ranges as shown in the Income Rating Ranges Chart (see figure 19) and the total number of households within the census block group that the park resides in. The park's income score is the average income rating of all households within the census block group.
- o Calculate the **population density score** by identifying the total square miles and the total number of people that live within the census tract that the park resides in. Calculate the number of residents per square mile and use the Population Density Score Ranges Chart to determine the park's population density score (see figure 20).
- o Calculate the **racially disadvantaged score** by identifying the number of people that are considered racially disadvantaged, and the total number of people that live within the census block group that the park resides in. Calculate the percentage of racially disadvantaged people and determine the park's racially disadvantaged score using the Racially Disadvantaged Ranges Chart (see figure 21).
- o Calculate the **safety score** by first determining whether the park is a City or County park. Next, identify

the number of reported crimes per the parameters set by the respective agency's crime data set, as described in the Safety Score section of chapter 4. Determine the park's safety score using the agency's respective Safety Scores Ranges Chart (see figure 22 and figure 23).

- o Calculate the **equity score** by taking the weighted average of all eight social factors. To determine the weight of each social factor, reference the Park Equity Score section in chapter 4.

#### 4. Determine the **Priority Score**

- o Calculate the **priority score** by taking the weighted average of the condition score, community value score, and equity score. To determine the weight of each factor, reference the Park Priority section in chapter 4.

After completing the steps above for a new or existing park summary sheet, arrange the park priority scores in ascending order, from smallest to largest. This sequence results in the updated park priority ranking.

When conducting a complete parks assessment update, it may be necessary to reassess and update, as needed, the community value and equity score ranges. This process aims to maintain a balanced distribution of scores to produce an effective priority score.

# 8 PARK SUMMARIES

## PARK SUMMARIES

This chapter includes a summary sheet for each park. The summaries provide results regarding each park's condition, community value, and equity scores as well as overall park priority scores. A conditions assessment table provides an overview of the quantity, condition and replacement cost for each infrastructure category found within a park. The park summaries are categorized by whether they are a City or County park, ordered alphabetically, and color coded according to the color palette below.

CITY PARKS

COUNTY PARKS

# ARISTA PARK

## PARK LIMITS

## PARK RANK & SCORES

City Park Priority Rank	22

## Architectural Assessments

# Existing Condition Evaluation

Project Watsonville City/ County Park Assessment  
 Site River Park Date \_\_\_\_\_  
 Building Shed /Restroom  
 Current Use \_\_\_\_\_ Current Room #  

Item	Type / Location	Condition / Rating	Remarks	Cost Est.
Exterior Siding	Textured ply sheets	2.5 Fair / Poor	Base trim missing in areas - broken ends to sheathing	\$5,800
Roof	Shingles	3.0 Fair	Rafter tails - several w/ rot	
Exterior lighting	(5) Lights - box units	2.0 Poor	(1) Broken at rear	\$2,500
Bldg Construction	2x Wood const	2.5 Fair / Poor		
	Ext Paint	2.5 Fair / Poor	Graffiti over mural / mismatched paint	\$2,500
	(4) Doors + (1) Window	3.0 Fair		
	Floor - unfinished concrete	3.0 Fair		
	Int finish - painted gyp. board	2.5 Fair / Poor		
Other / Misc.	(2) Toilet / (2) Sink	2.0 Poor		\$4,000
	Toilet Accessories	2.0 Poor		\$1,500
	Signage	1.0 Failed	(2) Missing toilet signage	\$1,200
	Int Lighting - single T-11 tube fixtures	2.5 Fair / Poor		
		<b>2.4 Overall Rating</b>	<b>Raw Subtotal</b>	<b>\$17,500</b>
Additional Comments	Blding sits on concrete flat work, not foundation			
	Chase - between single occupant restrooms			
	Storage space used as after school "Project Room"			
	Baby changing station - none			
	Urinals / Toilets / Sinks (totals) - 0 / 2 / 2			
	ADA compliance - upgrades required to current Code			
	Pre-fabricated - yes			
	Overall dim - 44'-0" x 11'-3" = Approx. 484 sf			
	5 = Excellent, 4 = Good, 3 = Fair, 2 = Poor, 1 = Failed
